## REPORT

Order 3183071 Order no: 2267  
Sample no. 701488

**According to the extent of the analysis the sample complies with the requirements of Warning values of the DGHM (Deutschen Gesellschaft für Hygiene und Mikrobiologie) "Published microbiological guideline and warning values for the evaluation of food" in the currently valid version..**

### Remark to Escherichia coli:

According to the National Footnote, these are presumptively determined  $\beta$ -glucuronidase-positive Escherichia coli.

### Remark to Staphylococcus, coagulase-positive:

Results below 150 cfu/g are considered as estimates.

### Remark to Salmonella spp.:

In the testing of Salmonella spp. according to ISO 6579-1 Salmonella Typhi and Salmonella Paratyphi are not included. These bacteria/germs are hardly found in food. If on the side of the customer there is a justified case of suspicion these two subspecies can be analysed by a PCR test, which needs to be ordered separately by the customer. In case of positive Salmonella results a confirmation of Salmonella spp. was conducted by MALDI-TOF (database BDAL/7311 MSPS).
